Compact gas analyser ideal for all adjustment and control work at industrial plants.

ecom Products offer you many benefits...

EXTREM EFFICIENT.

The high output level (up to 2.6 liters/minute) not only enables ecom analyzers to provide a fast reading: It also makes it possible to bridge long distances during sampling, or negative pressre in the application. Manometers also provide readings in record time.

EXTREM ACCURATE.

The reading accuracy of gas sensors (CO, NO, SO₂) is determined and adjusted at 5, 20 and 40°C in the climatic test chamber using standarized test gases. High-quality sensors provide a perfect reading for pressuremeasurements.

EXTREM COMPLETE.

ecom analyzers are sold and designed as an entity (device, probe, probe hose, case). In addition: Printer paper and filter, a solid shoulder strap, PC software and Apps.

EXTREM COOL.

The drier, the better: The gas to be measured is continually cooled to 5°C using a gas cooler. This way, the drying processis controlled.

Collected condensate can be easily emptied in some cases this occurs in automatic mode.

EXTREM FAR-REACHING.

ecom analyzers communicate wirelessly: Via Bluetooth, WLAN (wider range, more stable connection), as well as radio (highest range with the most stable connection). This way instruments can be remotecontrolled via e.g smartphones or ecom remote control unit.

EXTREM ROBUST.

Hard on the outside - even harder on the inside! Almost all ecom measuring devices are housed in an ultra-light aluminium casing. Its durability pays off in its daily use especially in rougher conditions.

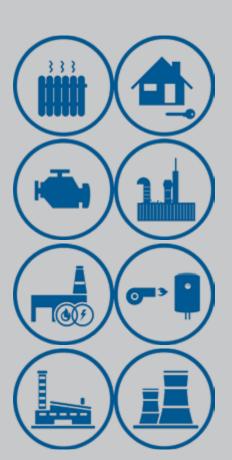

EXTREM SAFE.

The condensation control protects from moisture. An automatic CO shut-off (flushing of the CO sensor) without interruption of the measuring process ensures the long lifespan of the CO sensor. Each ecom instrument has its own "safety equipment."

EXTREM LOSS-FREE.

To measure the full concentration of extremly water soluble gases an inner PTFE coated hose or a heated sampling system are available. This guarantees the fast and condensate free flue gas transport.

...BY EVERY APPLICATION.

ENGINES

For inspection and adjustment work, e.g. during commissioning and maintenance of Gas engines, CHP plants and plants for combined heat and power, as well as for the exact assessment of NO_v emissions.

COMBUSTION

Combustion gas analysers, pressure meters, leak detectors and more for control and adjustment works at burners and large-scale firing plants in order to reduce emissions, to arrange for a more efficient combustion process and to optimize the thermal process.

INDUSTRY

Combustion gas analysers, pressure meters, leak detectors and more for the perfect preparation of water-soluble gases (i.a. NO_2 and SO_2) by industrial applications (like e.g. aluminium process, coke oven plants, cement processing, power plants, refineries, waste incineration...).
